

This roadmap can get you a
6–10 LPA AI role
in the next 3–4 months 🙌

0 → AI Engineer

Month 1 • Week 0

✓ Setup 🛠️

Install Python + VS Code. Search "Python for beginners" on YouTube (freeCodeCamp, CodeWithHarry). Bookmark roadmap.sh/python.

step 1 of 12

Month 1 • Week 1-2

✓ Python 🐍

Variables, loops, functions, OOP basics — your foundation.

step 2 of 12

Month 1 • Week 3-4

✓ Math

Linear Algebra + Probability + Stats — just enough to understand ML, not a PhD.

step 3 of 12

Month 2 · Week 1

✓ *Data Handling*

NumPy + Pandas — clean and play with real datasets.

step 4 of 12

Month 2 · Week 2-3

✓ *Machine Learning*

Regression, Classification, Trees — scikit-learn is your best friend.

step 5 of 12

Month 2 · Week 4

✓ *ML Projects*

Build 2 small projects — house price predictor, spam classifier.

step 6 of 12

Month 3 · Week 1

✓ *Deep Learning*

Neural Networks — Perceptron → CNN → RNN (just the intuition).

step 7 of 12

Month 3 · Week 2

✓ Frameworks

PyTorch or TensorFlow — pick one, don't learn both.

step 8 of 12

Month 3 · Week 3

✓ LLMs

Understand Transformers, Prompt Engineering, Fine-tuning basics.

step 9 of 12

Month 3 · Week 4

✓ Build with LLMs

Use OpenAI/Claude APIs — build a chatbot or RAG app.

step 10 of 12

Month 4

✓ Deployment

Docker + Streamlit/FastAPI + deploy on Render/HuggingFace.

step 11 of 12
